

ECLIPSE SURVEILLANCE SYSTEMS FOR PRISONS & CORRECTIONAL FACILITIES

CCTV cameras help to capture and document all incidents that involve drug use, inmate violence, and possible misconduct by officers. Those are but a few examples of unfortunate actions which may take place within prison walls. CCTV surveillance camera enhancements are allowing correctional facilities to upgrade older CCTV systems to provide more extensive monitoring and a strengthened level of protection for guards, staff, and inmates.

Improving Coverage – Correctional facilities and prisons are very large complexes with many different areas which all require very close monitoring. Security personnel and guards cannot possibly be everywhere; CCTV security cameras establish constant coverage of the entire facility.

Inmate Monitoring – CCTV surveillance helps guards to pinpoint suspicious inmate activities and helps to prevent possible prison incidents from getting out of control.

Visual Evidence – New HD digital surveillance footage can be archived for long periods of time. Digital video footage has proven to be a valuable resource when investigating prison incidents.

Maintaining Order – Prisons can break out into large fights or gang wars in an instant. CCTV cameras help to monitor areas with large prisoner groups when they convene. Prison yards, recreational areas, and cafeterias can be tightly monitored by surveillance from multiple CCTV security cameras.

Assault Reduction – Due to the nature of the correctional facilities, prisons are in a constant state of high tension and violence which makes fights inevitable. CCTV cameras help to deter these events while also helping to analyze these incidents of criminal violence.

Drug Smuggling Prevention – CCTV surveillance systems play a key role in preventing visitors as well as inmates from attempting to smuggle contraband into the facility.

Monitor Behavior – There are times when correctional officers and guards can get out of line with inmates and these incidents are caught on camera. This video footage can be used to investigate these incidents and can prevent possible future misconduct.

Transporting – Escorting prisoners through cell-blocks and hallways is dangerous and CCTV security cameras can provide higher levels of security and safety while inmates are transported throughout the facility.

Enhanced Searching – Digital CCTV surveillance offers digital video feeds to be stored and archived in digital video recorders with hard-drives instead of old-school video cassette tapes. New enhancements in digital video allow for fast searching and easy backups of incidents.

Remote Monitoring – Prison video feeds can be monitored from anywhere there is an internet connection. Authorized personnel can view multiple video camera feeds from a Mac, PC, Tablet, or Smartphone, rather than having to be in one room monitoring all the cameras at once.

CCTV Surveillance Camera Risks

Tampering – Inmates have a long time to think about and carry out any mischievous plot they have in mind. Inmates often attempt to damage and tamper with prison security equipment. Many correctional facilities already use vandal proof cameras to help curb this issue, but there is always the possibility that a CCTV camera will be vandalized or damaged and lose its video signal. This is why it's imperative to have a backup security plan.

Reliance on Cameras – Security measures implemented for correctional facilities and prisons should not solely rely on surveillance equipment. Though effective, and undoubtedly necessary, security cameras help to maintain order within a prison environment but they are simply one part of the overall security effort. Guards, officers, and staff along with security alarms, access control, and other safety measures should supplement CCTV camera systems.

CCTV Surveillance Camera Configuration

There are many challenges when installing CCTV cameras in prisons and correctional facilities. With multiple buildings, cell blocks, hundreds of rooms, and a vast amount of outdoor and indoor areas to cover, it can be hard to achieve complete coverage. We suggest you consider the following before deploying a prison or correctional facility CCTV system:

- Cameras should be installed in common areas such as prison yards, cafeterias, and recreational areas.
- Cameras at all stairwells, corridors, and hallways, along with any other area that inmates may be escorted.
- Cameras at all processing, identification and booking areas.
- All cell block activity should be monitored via CCTV video surveillance.
- Prison yards should be covered from all angles and should use PTZ cameras to supplement fixed cameras so guards may follow persons of interest.
- All entrances and exits of the facility and independent cell blocks should have CCTV surveillance.

Eclipse security solutions solve complex correctional facility challenges by promoting safety and facial verification of inmates. Our solutions allow jail facilities to operate efficiently, protecting inmates, staff and visitors while promoting verification and analytical data to minimize incidents. Our solutions include:

- **Eclipse CMS:** Free, fully scalable, centralized management software is perfect for a single correctional penitentiary or multi-location correctional facilities.
- **Analog HD:** Eclipse Analog HD allows correctional facilities to upgrade to high resolution video and images quickly by taking advantage of existing legacy cabling.
- **Facial Recognition:** Eclipse offers accurate and fast identification of inmates and visitors. Use our black and white-list database capabilities to receive instant notification in the event of a breach in security.
- **License Plate Recognition (LPR):** Use our professional LPR solutions to capture plate numbers and authorize vehicle access to facilities.
- **360 Degree Cameras:** Our fish-eye panoramic cameras provide complete coverage of stairwells, holding facilities, cells, hallways, cafeterias, visitor areas, and recreational yards. Easily monitor the entire compound, and secure greater square footage with fewer cameras.
- **Enterprise Storage:** Eclipse offers high capacity storage devices that exceed the requirements needed to meet federal as well as local correctional facility regulations, at a fraction of the cost.

Eclipse Security Correctional Surveillance Solutions

Eclipse offers many solutions to protect correctional personnel as well as inmates, helping facilities more easily maintain a safe, secure environment. Features include:

- **Eclipse CMS:** Manage video from multiple facilities with our Eclipse central management software. Integrates with analog, analog HD, and IP cameras for ease of use across all systems.
- **Facial Recognition:** Eclipse offers accurate and fast identification of inmates, visitors and staff with our black and white-lists database to quickly find individuals and notify enforcement of their location.
- **360 Degree Cameras:** Our fish-eye panoramic cameras provide complete coverage of stairwells, holding facilities, cells, hallways, cafeterias, visitor areas, and recreational yards. Easily monitor the entire compound, and secure greater square footage with fewer cameras.
- **Inmate Analytics:** On-board analytics such as line crossing detection provides an alert if a designated area has been accessed or breached.
- **Enterprise Storage:** Eclipse's high capacity storage devices offer the functionality required to meet state and local correctional facility regulations at a fraction of the cost.
- **License Plate Recognition (LPR):** Use our professional LPR solutions to capture plate numbers and authorize vehicle access to facilities.
