

ECLIPSE SURVEILLANCE SYSTEMS FOR YOUR RESIDENCE

Choosing security cameras for your home can be a daunting process. HD cameras are quickly becoming the preferred choice among homeowners. Much like televisions that made a transition to digital video, so have security cameras. HD cameras help protect your residence both indoor and outdoor from theft and vandalism. We offer a quick guide to determine your home security needs and show you the long-term benefits and advantages of home video surveillance.

What should you consider before buying?

There are several different security camera technologies available in various form factors. Consider your preferences for features and aesthetics. Do your cameras need the ability to see at night? How many cameras do you actually need? Questions like this must be considered by every homeowner.

How many cameras do I need: Placement of the cameras, coverage areas, and the property size play a huge role in determining your security camera system. The upside to newer camera systems is the ability to add any number of surveillance cameras to your home system at any given time. Most systems are scalable and allow you to manage them easily over a network.

Form Factor: Surveillance Dome cameras are a good choice simply because they blend in with the environment and are typically inconspicuous. They offer features like smoked dome enclosures that do not allow onlookers to see where the camera is pointing. This also provides an aesthetically pleasing look and discreet functionality. Surveillance bullet cameras are far more in-your-face and can usually be spotted by visitors, intruders, and passers-by. If you want a more discreet camera then dome cameras are usually a good choice to help keep your home video surveillance system hidden to any potential trespassers.

Indoor and/or Outdoor Cameras: Exterior home surveillance cameras help to deter potential burglars, help prevent loitering from trespassers, and help discourage thieves from stealing or damaging your vehicle. Outdoor cameras record and monitor suspicious, unusual, or criminal activity that happens to occur on your property. As a precautionary measure, indoor security cameras serve well to document cases where an actual break-in does occur. You can use both the indoor and outdoor cameras to follow the subjects as the crime took place, or record video in the event your outdoor camera was not able to capture the footage. Both indoor and outdoor cameras are extremely important when putting together a surveillance system for your home.

Day/Night Camera: True day/night visibility is a feature that many cameras offer in today's market. These cameras allow you to see in complete darkness. Considering that most vehicle thefts take place at night, it's a good idea to monitor your driveway. Careful consideration needs to be taken in regards to whether or not day/night technology is important for your home.

Unfortunately, most residential security systems are purchased as a reaction to an incident that has already occurred. Recent burglaries are one of the top reasons why consumers buy a new system. You may have a friend or neighbor whose home or vehicle was recently broken into. Regardless of your motives for protecting your home, we can show you how high definition security camera systems can effectively monitor all activity surrounding your property.

Burglaries: Home security cameras help to discourage break-ins from burglars, and serve as a vital tool in identifying as well as prosecuting perpetrators who make the mistake of targeting your residence.

Trespassing & Vandalism: We all have all experienced some form of vandalism. Whether it was spray painting, graffiti, egging, pranks, mailbox tampering, broken windows, or toilet papering. Vandalism comes in various forms and it does happen. They can often lead to the devaluing of your property. Installing a CCTV surveillance system to catch these vandals in the act will provide you with the evidence you need to go to the police.

Outdoor Crime: The inside of your home is very important but so is the outdoor part of your home. Criminals and burglars often target your cars and other outdoor equipment such as motorcycles, tractors, and boats.

Neighborhood Watch: Whether you decided to purchase a surveillance system because of a recent incident or you simply wish to keep an eye out for anything out of the ordinary, surveillance cameras help alleviate your concerns and allow you to observe critical areas of your home. Strange noises and suspicious pedestrians can be monitored without the need to go outside. A well installed outdoor surveillance camera can monitor and record all outdoor activity and gives you insight into what is really happening when you're not present.

Monitoring Home Service Personnel: Some homeowners use outside services for their homes. Whether it be a maid service, house cleaners, gardeners, contractor or the pool man, security cameras are perfect for monitoring anyone you've hired whom can access your home. Unfortunately, there are some cases where home service personnel may steal valuables, such as jewelry, prescription medication, and small electronics. Often times homeowners do not even realize these items are missing until it's too late.

Your home and family are priceless. A well-designed home surveillance system gives you reassurance and makes your family feel safe. Our high-end selection of HD surveillance cameras offers customers key benefits in both their performance and design.

Increasing Safety: Everyone wants to feel safe and have a sense of security. Above all, we want to protect our family, pets, property, and valuables. Keeping and feeling safe is what matters most.

Alerts 24/7: Modern digital video surveillance systems offer the unique ability to send direct alerts to your phone or email as soon as they detect motion or tampering. Our NVRs, DVRs, and even some of the cameras themselves offer alarm input/outputs to trigger your burglar alarm if you choose.

Peace of Mind: The proper investment in security cameras for your residence will provide you with peace of mind for you and your family. You can go to work or on vacation and not think twice about home. The security camera system will keep you posted and will allow you to check in anytime you want.

You have many options when installing your security cameras. You have the option of using coaxial cable similar to your cable tv service, or using an ethernet cat5 cable just like your PC uses to connect to the internet. When choosing the security camera for your needs it is imperative to look at your property and determine how easy or difficult the wiring may be. As far as resolution and picture quality, both cables provide you with the same image fidelity, they simply transmit them differently. We can help you better determine which technology to use.

Entry and Exit Points: Entry and exit points should have cameras installed. This will make sure that anyone who comes in or out of your home is monitored and recorded. Consider mounting the cameras so they point downward from the top of the door or possibly from a side mounted on the ceiling so you may see the person and recognize who they are.

High-Traffic Rooms: High-traffic rooms or common rooms should have a security camera. This helps to monitor or record events if a burglar or prowler gets inside of your home. Since these rooms are typically locations that must be passed through once inside your home it's imperative to install an indoor camera at these locations, such as the living room or kitchen.

Roofline or Eaves: Home rooflines or eaves provide a very good location for camera placement. This location allows for some of the best views and keeps the camera semi-protected against the elements.

Driveway and Garage Doors: Outdoor possessions are important to homeowners and it's imperative that they remain safe from trespassers. A security camera should be installed near all driveways and/or garage doors. This will help safeguard your outdoor assets such as boats, trailers, jet skis and vehicles.

Outdoor Structures: Some homeowners may have other buildings on their property. Horse stables, barns, guest houses, pool houses, cowsheds, greenhouses, tool sheds, and carports are just some examples of outdoor property structures that need to be protected. Consider monitoring these important areas with your home surveillance cameras.

The end result and user experience are very important to us. We only offer security cameras that produce the most detailed images and include the highest quality features. In the end, the main point of having a CCTV camera system is to be able to recognize and identify someone on video. We look to improve the user experience by only using HD video technology that ensures upmost quality and reliability.

Monitoring Your Home: NVRs (network video recorders) or DVRs (digital video recorders) allow you to monitor and view several cameras simultaneously from any PC, Mac, or smartphone with an internet connection. Internet-based security camera systems offer a convenient way of accessing advanced video technology using a simple, easy to navigate interface.

System Scalability: Many vendors selling security cameras today charge you a license fee for each camera you need to record or monitor. For us, this is not necessary. Our systems do not need licenses and you can always add as many cameras as you need to your system with no additional charge. You can choose from 4, 8, 16 and 32 channel systems that can grow and expand as you need them. Since we use the latest in technology you don't have to worry about your system becoming obsolete any time soon.

Megapixel Image Quality: It's very unfortunate but a majority of law enforcement personnel cannot properly prosecute criminals because surveillance footage is unusable due to poor video quality. This is why megapixel HD image quality is important. Often times consumers purchase common analog CCTV video because of low cost and the end result is unusable video. Using HD video security cameras ensures that the recorded video will be of the highest quality. This is a professional standard that we adhere to with every one of our HD surveillance cameras. This results in higher detail, reduced noise, and virtually no motion blur, along with higher frame rates. This helps greatly when trying to recognize faces or capture license plates

Eclipse Security solutions offer unparalleled surveillance systems that implement artificial intelligence, 4K video recording and push notifications that alert you when an alarm is triggered. Our solutions allow home owners to be at ease knowing their home is recording possible crimes and break-ins. These solutions include:

- **Eclipse CMS:** Free, fully scalable, centralized software allows home owners to monitor, playback and manage video from any PC.
- **Analog HD:** Eclipse Analog HD allows home owners to upgrade to high resolution video and images quickly by taking advantage of existing legacy cabling.
- **IP Cameras:** Eclipse offers the best in network IP cameras with high resolution in 4k. We offer various models that are aesthetically pleasing while producing amazing results.
- **Starlight:** Our Starlight cameras offer full Color at Night. Color allows for you to better identify and document possible criminals and incidents when they occur.
- **Storage:** Eclipse recorders offer long term storage that is stored locally at your residence. You can record months at minimal costs without having to pay for cloud storage or risk hacking.
- **Mobile Apps:** Eclipse View app offers real-time remote viewing from anywhere in the world. Receive real-time push notifications when motion or event occurs allowing you to instantly see live video or playback of the incident.
