

ECLIPSE SURVEILLANCE SYSTEMS FOR YOUR VACATION HOME

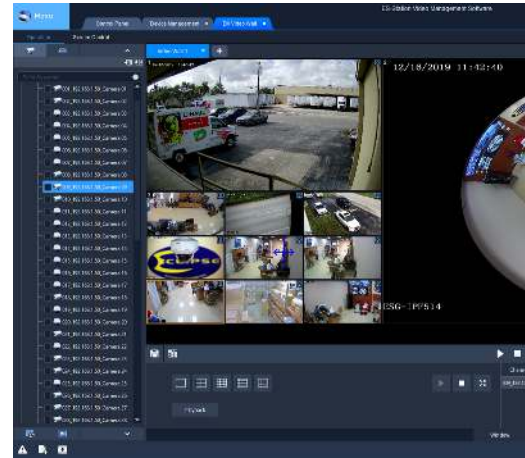

Security cameras are a great tool for protecting vacation properties. Being unoccupied for long periods of time, vacation homes tend to be more susceptible to theft, burglary, and vandalism. A video surveillance system installed at your cabin, condo or beach house will help keep your property safe when you're not around.

Easy of Install – Today's HD security cameras are very easy to install. Many of the systems can be self-implemented easily by using a single cable to interconnect your camera and digital video recorder.

Monitoring Remotely – DVRs (digital video recorders) and NVRs (network video recorders) allow you to transmit your surveillance camera video over the internet. You can use any PC, Mac, iPhone or Android device to see live video and even perform playback, providing the ability to keep tabs on your property at any time, from practically anywhere in the world. Recent enhancements even allow you to receive push notifications directly to your smartphone, alerting you of unwanted visitors. These features allow you to easily safeguard, as well as monitor your property, regardless of your physical location.

Theft Deterrence - Having conspicuously placed surveillance cameras helps to discourage would-be thieves and vandals. In the event that your home is indeed burglarized, video security footage will prove to be crucial in regards to being able to identify and prosecute the perpetrators.

Damage – Weather can cause major damage to your security cameras. It's imperative you install cameras designed and rated for outdoor use.

Theft and Vandalism - Cameras that are physically accessible to potential thieves are often times easy targets. Criminals will try to damage, obscure, or remove the cameras in an attempt to avoid being identified. Consider using vandal-proof cameras to mitigate the likelihood of your system being compromised.

Power Outages – Power outages or electrical surges can inflict irreparable hardware damage to your security system, they can also cause interruptions in video recording. We suggest that you take adequate measures to safeguard your security system using properly spec'd out battery backup and power conditioning peripherals.

Not all vacation homes are alike. These properties can vary widely in size, type, and location, which in turn means they will all have unique security needs. Here are some things to consider when choosing and configuring your surveillance system:

What is the primary threat to your property?

Consider your neighborhood, is the crime rate significant enough to cause you apprehension in regards to the overall security of your vacation home?

Have your neighbors had any recent occurrences of vandalism or robberies?

Is your vacation home particularly susceptible to break-ins or theft?

Vacation Home Camera Setup Advice

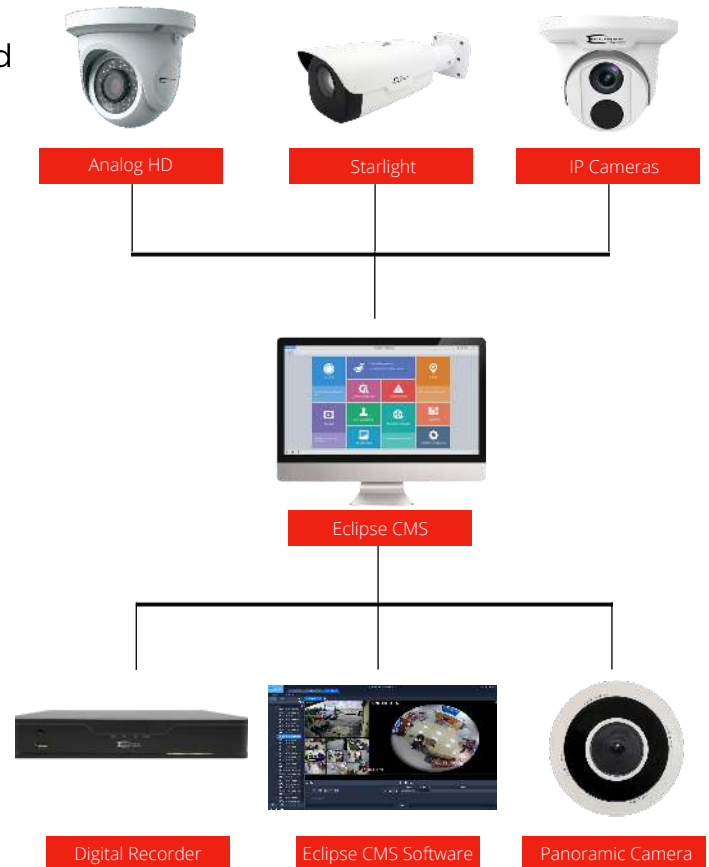

- All exit and entry doors, as well as windows should have security cameras installed nearby. This ensures that everyone who enters and exits your home is recorded.
- Consider your valuables, items such as art, electronics and all other valuable, easily transportable belongings, should be monitored at all times with a fixed security camera placed nearby.
- The outside of your home is very important. If you have high ticket items (jetskis, boats, golf clubs, skis, etc) stored on your property, consider locating security cameras oriented towards covering these areas of concern.

Eclipse Security solutions offer unparalleled surveillance systems that implement artificial intelligence, 4K video recording and push notifications that alert you when an alarm is triggered. Our solutions allow vacation home owners to be at ease knowing they have a solid layer of protection to help deter would-be criminals. These solutions include:

- **Eclipse CMS:** Free, fully scalable, centralized software allows vacation home owners to monitor, playback and manage video from any PC.
- **Analog HD:** Eclipse Analog HD allows home owners to upgrade to high resolution video and images quickly by taking advantage of existing legacy cabling.
- **IP Cameras:** Eclipse offers the best in network IP cameras with high resolution in 4k. We offer various models that are aesthetically pleasing while producing amazing results.
- **Starlight:** Our Starlight cameras offer full Color at Night. Color allows for you to better identify and document possible criminals and incidents when they occur.
- **Storage:** Eclipse recorders offer long term storage that is stored locally at your residence. You can record months at minimal costs without having to pay for cloud storage or risk hacking.
- **Mobile Apps:** Eclipse View app offers real-time remote viewing from anywhere in the world. Receive real-time push notifications when motion or event occurs allowing you to instantly see live video or playback of the incident.
